

CSC357 2025, Lab 1: For this lab, we will use Miranda software to discover how agents use sensors and effectors to interact with their environment. Special thanks to Daniele Cafolla for help with the software. If any of you have already used this software in his robotics class, you may find this lab easy, so feel free to help others get set up.

Step 1: Launch Miranda at <https://irai2.com/mir/>

Step 2: enter your connection code and select 'log in':

I2L85JU99IG04PCA6QDC4SG8PPI23Q4782E840T6EAC2K0HC53P03

Step 3: Enter your given "User Name" and "Password", and click ok

Step 4: click on the cloud and open up scenario ":Mbot Race Challenge". Your task is to get your green robot to the finish before the red one.

Hints:

- The robots race when you hit play.
- Put the sensors in the environment to see what how their values change as the robot moves around
- You will need to put most of your code in some kind of a loop.

Submit for this lab:

- 1) A screen shot of your code and your bot crossing the line (Or its location when Red crossed the line if you didn't manage to win)
- 2) The values of the sensors when the bot is on the line.
